WATER & COMPRESSED AIR SUPPLY (P2/2)

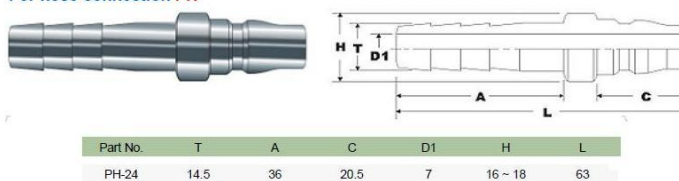

Compressed air

1. The physical conditions of the Exhibition may differ from those of the Exhibitor's premises and thus allowances must be factored into the orders.
2. Compressed air will be delivered from air compressors located outside the Hall, with dryer unit, and delivered to your booth via an underground delivery system. Supply is not totally "clean", Exhibitors must provide their own filters if 100% clean, dry air is needed. For your information, the percentage of humidity and oil content is approximately 5% and 10ppm respectively. It is the responsibility of the Exhibitor to have an air-bottle in the machines to drain off the water residue regularly.
3. The Organiser reserves the right to supply any requirements in certain parts of the Hall by electricity-driven individual compressors located at the booth due to the existing Hall limitations. However, this air supply may not have a dryer incorporated in the system.
4. All connections will be terminated in a quick-release coupling, type SH24/PH24 for 15 mm to 20 mm internal diameter hose. Exhibitors requiring other type of connection must provide their own fittings (both male and female) for attachment to the coupling or valve provided by the Official Contractor.

For hose connection **SH**

For hose connection **PH**

5. All connections to machines will be carried out by the Exhibitor's staff.
6. If the standard supply shown in the Order Form is not suitable for your purpose, please provide the Official Contractor directly with detailed specifications for a quotation.
7. Exhibitors are not permitted to cut or damage any equipment or fitting supplied by the Official Contractor, otherwise the exhibitor must bear the cost of such damage.
